

REFUGEE POPULATION IN JORDAN

- Registered Refugees as of 1 September 2014
- RRP6 Refugee Planning Figure

AUGUST HIGHLIGHTS

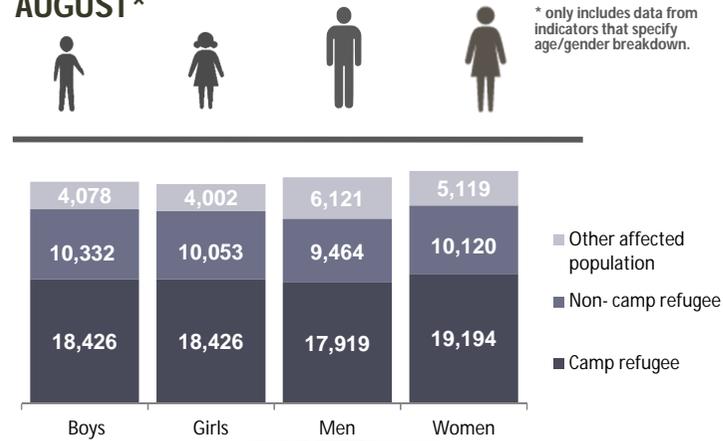

Arrival of new Shelter Working Group chair: Mohamed Abdel-AI has joined UNHCR as Senior Shelter and Settlement Officer and chair of the Shelter Working Group. Mohamed has replaced Werner Schellenberg, and interim chair of the Shelter WG Nagendra Adhikari, who have both finished their missions in Jordan.

Gender mainstreaming for the Shelter sector: The Shelter WG has two new gender focal points; Saname Oftadeh (LWF) and Matthew Richard (UNHCR). They attended the 'Gender in Humanitarian Action Training' on 25-27 August 2014 organised by Merrin Waterhouse the Gen-Cap Advisor for the IATF and HTC.

Reviewing and updating the Shelter strategy for Jordan: The Shelter WG is in the final stages of reviewing and updating the objectives and principles of Jordan's Shelter Sector Strategy with consideration of activities under RRP6. The taskforce aims to harmonise the guidelines with those reflected in UNHCR's Global Shelter and Settlement Strategy. This process will contribute to the specifics of short-term emergency response interventions and a transition to development-focused response interventions, in addition to linking with the NRP, Shelter sector guidelines, and inter-sector coordination.

Conditional Cash for Rent Guidelines: a task force of the Shelter WG is in the final stages of writing guidelines for the cash component under the shelter sector. These guidelines will help to harmonize the methodology and level of assistance to Syrian refugees in urban/rural settings among members of the Shelter sector.

POPULATION ASSISTED BY SHELTER SECTOR IN AUGUST*

A group of young girls pose for a photo in front of a T-Shelter in Azraq Camp that has

NEEDS ANALYSIS

All refugees arriving in the camps are dependent on the provision of shelter and access to basic services. The distribution of emergency tents in Zaatarri will continue until emergency tents can be replaced with pre-fab caravans. Upgrading and maintenance of pre-fab caravans is needed to meet minimum shelter guidelines such as sufficient shelter space, thermal insulation and rainwater protection, (e.g. container units with 15 M² are too small for a 5 person household and leakage from container roof sealings are reported as a major concern).

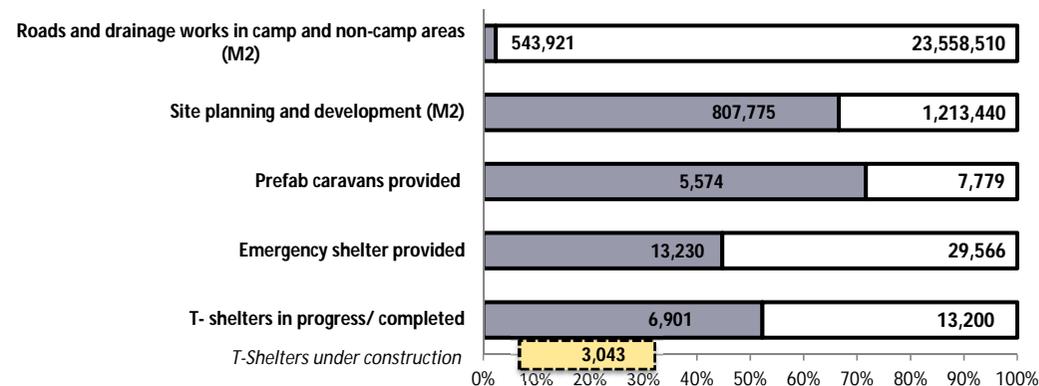

Shelter solutions for the desert camp of Azraq are designed to reduce or even avoid the need for distribution of costly emergency tents and repair works on pre-fab container units. Azraq's T- Shelter prototype is designed as a shelter kit which allows for fast assembling of factory manufactured kit components on site, for improved mitigation of harsh weather impact, and for reduced shelter investment costs. The shelter is designed as a transitional shelter (i.e. as T-shelter) for a structural life span of at least five years, thus providing an opportunity to dismantle and re-assemble the shelter for re-use elsewhere. The shelters production technology is anticipated to not only facilitate capacity and income generating spill over effects to both the local construction labour force but also for shelter beneficiaries if refugee women, boys and girls can be involved in shelter finishing, shelter maintenance and shelter decommissioning works.

Access to affordable and adequate shelter in urban settings is an increasing concern for vulnerable refugees, with rental prices rising and availability of accommodation decreasing. Rental price increases is seen as cause of tensions between Syrians and Jordanians in communities, as Jordanian families also struggle to cope with the rising cost and limited availability of adequate accommodation.

Shelter interventions in refugee hosting communities therefore focus on awareness building, rent support, upgrading of sub-standard housing units, weather mitigating shelter adaptations and completion of unfinished buildings.

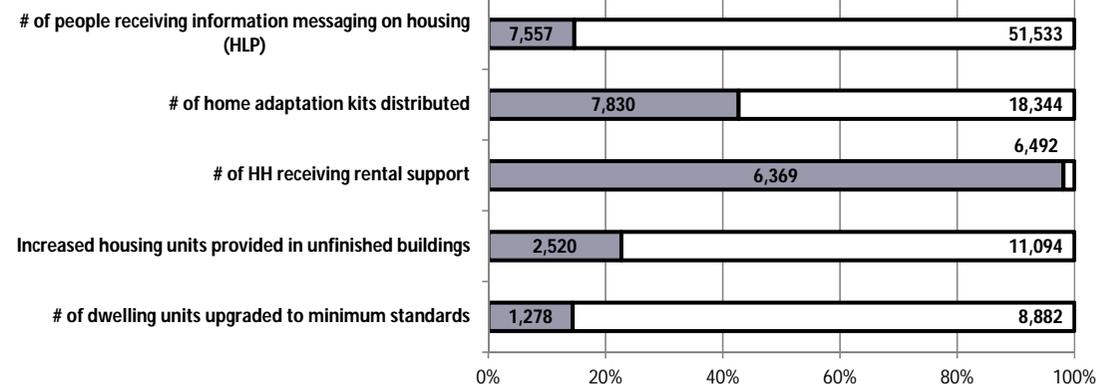

PROGRESS AGAINST TARGETS IN CAMP
