Administrative divisions, roads and city names data: OSM

Projection: WGS 1984 UTM Zone 37N

The information presented cannot be guaranteed as an exhaustive picture of the situation as it is not based on a census of the refugee population. The phenomenon type depiction here should be interpreted with caution as their interpretation largely depends on an estimate population size at the “Basic Service Unit” level. The present map reflects a snapshot at a given time and should therefore be used to capture and display trends rather than trends over time. That said, the data from this assessment can be used to discover characteristic patterns, but is not legally valid for case based decisions.
