²Actual capacity is calculated as the subtraction of current places minus 12% which is this week's estimated average natural loss for mainland and 11% for islands. Natural loss is the number of places that cannot currently be used because of damages/repairs, protection issues, family size, etc. The formula applies to all type of accommodation.

Actual capacity is a close estimate of available places to be used as reference.

³Occupancy rate is calculated as the percentage of current population over actual capacity.

*Based on a full headcount as of 04.12.2017, the actual available capacity was estimated to be at 1,370. This can be used for immediate planning.
