Between 11 and 24 March, 254 new arrivals were recorded. Since 1 January 2017, 4,569 Somali new arrivals have been recorded in Melkadida, Ethiopia, all of whom have been registered as refugees by the Government of Ethiopia and UNHCR and relocated to the Kobe, Hilaweyn, Buramino, Bokolmyno and Melkadida refugee camps.

- On average, 50 persons arrived daily between 1 January and 24 March 2017.
- 70.5% of the total registered new arrivals are children, whilst 87.4% are women and children.
- The average GAM rate amongst new arrivals below the age of five is 71.4%. The prevalence of malnutrition amongst the pregnant and lactating women is 19%, with an average of 33.6% since January 2017.
- The new arrivals, mostly originating from the Bay region (70%), Middle Juba (13%) and Gedo (7%), reported to have fled conflicts, exacerbated by food insecurity in Somalia.
- To date, Ethiopia hosts some 245,500 registered Somali refugees in the areas of Melkadida and Jijiga.
**UPDATE ON THE SITUATION**

**Melkadida**

- **Protection:** Weekly Protection meetings are being held to discuss priority issues as well as to improve coordination amongst partners in the Reception Centre. Upon registration, new arrivals are provided with high energy biscuits, BP5, dignity kits and soap. Persons with Specific Needs (PSN) are identified at the reception centre and an updated list is shared along with the manifest for relocation, targeted assistance and referrals. Information sessions are held on the reporting of protection issues, services in the reception centre and in the camps. Awareness-raising is being conducted on SGBV ‘Key Messages’, as well as on health and hygiene promotion for women and on the reporting of SGBV incidents. Mosquito nets, baby clothes, basins, laundry and toilet soap, shampoo, body lotion and headscarves were provided to newly arrived vulnerable women.

Moreover, a Save the Children-run protection help desk has been established in order to identify Unaccompanied and Separated Children (UASC), as well as other vulnerable refugees under the age of 18. To date, 51 UASC have been identified amongst the new arrivals. Tea talks are held with children to discuss their rights, and child friendly spaces are operational. With the support from the Refugee Central Committee, Non-Food Items, including mats, were distributed to 21 selected UASC and other vulnerable children.

- **Food & nutrition:** Nutritional screening was carried out for the newly arriving refugees. During the reporting period, a total of 66 under-five children and 30 pregnant and lactating women (PLW) were screened to measure their nutritional status. Accordingly, the prevalence of Severe Acute Malnutrition (SAM) and Global Acute Malnutrition (GAM) amongst the children under the age of five was found to be 7% and 41% respectively against the emergency threshold of 15%. The average GAM rate amongst new arrivals below the age of five is 71.4% since the beginning of the year. During the reporting period, the prevalence of GAM amongst the pregnant and lactating women stands at 19%, with an average of 33.6% since January 2017.

Amongst the new arrivals a total number of five children below the age of five and one mother were admitted to the therapeutic feeding programme; 26 children and three mothers with Moderate Acute Malnutrition were admitted to the targeted feeding programme; and 35 children and 26 mothers were included within the Blanket Supplementary Feeding Programme. Food is provided through a mix of wet and dry feeding. Children up to the age of 10 and PLW receive, twice a day, a fortified porridge (CSB), as well as High Energy Biscuits. Upon arrival in the camps, all refugees are provided with monthly food rations and CRI's. All children and PLW with SAM are provided with Plumpy Nuts and admitted to therapeutic and supplementary feeding programmes when relocated to camps.

- **Health:** MSF is providing 24/7 emergency healthcare service which includes emergency OPD and emergency admission at the health post located in the Reception Centre. Intensive surveillance is ongoing in collaboration with the Woreda Health Bureau, ARRA and MSF. Deaths as well as diseases with epidemic potentials such as measles, acute watery diarrhoea (AWD) were not reported. In addition, routine vaccination was provided to newly arrived children under the age of five and women of reproductive age group.

- **WASH:** At least 20 litres per person per day (ltpd) are being provided to new arrivals at the Reception Centre. Latrine coverage stands at a ratio of 15 persons per latrine drop hole against the UNHCR minimum standard of 20. Disinfection and regular water quality monitoring is being carried out by trained personnel. Solid wastes management and hygiene messaging is being carried out on daily basis. WASH services at the camps are available for new arrivals.

- **Challenges:** In spite of the efforts to address the nutritional needs of new arrivals, malnutrition continues to pose a challenge, especially considering the already high rates at the receiving refugee camps. The current drought spreading across the Somali region poses constraints in terms of available resources in the area.
