2017 achievements - nutrition

- Nutrition surveys conducted: 8 (target: 5)
- GAM prevalence in children 6-59 months: 22.1% (target: <15%)
Challenges

• Limited number of health facilities, gaps in drug provision and referral

• High prevalence of communicable diseases despite prevention measures

• Overlap of community outreach activities

• Persistently high global acute malnutrition, underlying causes poorly understood
Priorities for 2018

• Improve access to and quality of health care services
  – Construction/maintenance of health facilities
  – Capacity building
  – Balanced score card assessments

• Enhance access to treatment for non-communicable diseases

• Enhance health & nutrition data management
  – mobile HIS, Last Mile Mobile Solution
Priorities 2018

Strengthen prevention of global acute malnutrition in children under 5

- Nutrition causal analysis, Infant and Young Child Feeding Framework, provision of complementary food

Strengthen cooperation with Ministry of Health/Regional Health Bureaus and development partners
Thank you!
