ETHIOPIA - 3W PARTNERS PRESENCE AS OF MARCH 2018

The main purpose of this 3W is to show the operational presence by sector and location within Ethiopia operation. This document can enable organizations to help identify potential partners quickly give a very rough understanding of an ongoing response and superficially identify potential overlaps or gaps in response.
The piloting of a common Data Gathering Tool aligned to sectoral objectives and performance indicators aims to:

- **Enable** a standard approach to how data is created, updated, stored and analysed within the Ethiopia Refugee Response to support collective outcomes.

- **Reinforce** joint accountability between all humanitarian partners (IP and OP), and streamline existing monitoring and reporting processes.

- **Contribute** to the preparation of a quarterly situational analysis, provide partners (and donors) with a comprehensive overview of trends, progress against targets, to inform response interventions, defining operational gaps and funding needs.

In 2018 for South Sudanese caseload only to support current RRRP minimum reporting requirements (24 partners).
Inter-Agency Data Gathering Tool
The Analysis Spectrum

- Who, what, where, when, how?
- Why is it like this?
- Does it make sense?
- How is it compared to pre-crisis situation?
- What is important and why?
- Is it plausible?
- How sure are you?
- So what?

Inter-Agency Data Gathering Tool
Workflow and responsibilities

Monitoring - Planning

Country-wide
- Prepare Monitoring Plan
- Identify Population Site and Area of Responsibility by Population Group

Sector Specific
- Update Baseline and Target by PPG, Data Collection Frequency by Indicator
- Accept Indicators Data Collection Planning

Organization
- Subscribe to Objective by Location

Monitoring - Data Collection

Organization
- Collect Indicators Attributes by Organization and Site

Site
- Collect Indicators Attributes by Site

Sector Specific
- Collect Indicators Attributes by Area of Responsibility

Country-wide
- Collect Indicators Attributes by Population Group
