Severe drought conditions prevail in significant portions of Somalia after four successive seasons of below average rainfall. In September 2017, the Displacement Tracking Matrix round 6 estimated that 2 million people in the 58 assessed districts of Somalia were displaced, the majority of whom were children (under 18 years) and women. In search for food supplies, income sources and humanitarian assistance, displaced populations have moved towards urban areas where new internally displaced persons (IDPs) sites are established. However, the continuing increase in the displaced population has intensified the strain placed on existing sites and service provision.

A Detailed Site Assessment (DSA), conducted by REACH between October 2017 and March 2018, aimed to get a snapshot of the situation of the IDPs across Somalia through key informants interviews. To support the DSA, a Comprehensive Site Assessment (CSA) was conducted. The CSA is a household-level survey conducted amongst a representative sample of all IDP sites in each targeted district. It provides detailed information about the available infrastructure and services for IDPs living in the sites as well as their needs and vulnerabilities in the targeted districts (Afgooye and Baidoa). Detailed information at district level will enable operational partners to plan appropriate responses to fill the needs gaps identified across sectors. Based on the severity score from the DSA and accessibility, Baidoa and Afgooye districts were selected for the first round of CSA.

IDP households were sampled for statistical representativeness at the district level, with a 95% confidence level and a 5.17% margin of error. 347 household surveys were conducted across 104 sites in Afgooye during April 2018 and May 2018.

In addition to the household interviews, all identified education, health and nutrition facilities accessible to IDPs in each district were mapped. A snowballing sampling strategy was used starting with the information provided by the humanitarian partners. The enumerators asked to the person in charge of the facility if other facilities were accessible until exhaustion in order to ensure that all facilities were reached.

Number of assessed households: 347
Estimated number of IDP households in Afgooye: 10,527
Estimated number of IDP individuals in Afgooye: 56,453

**DSA SEVERITY SCORE**

As part of the DSA, REACH in coordination with the CCCM cluster developed a severity score index to describe the needs and gaps of each IDP site, and identified and aggregated these scores for each district. Two key informants were interviewed per site. 24 indicators were selected to represent seven sectors and then aggregated for an overall score. Each answer was given a weigh and each sector had a maximum score of 10. The overall score was determined by summing the scores of each sector, with a maximum score of 70. For each sector, the severity category is given according to the score; 0: none; 1-2: low; 3-4: medium; 5-7: high; 8-10: critical. The overall severity category is given according to the following; 0: none; 0-19: low; 20-39: Medium; 40-59: High; 60-70: Critical. Below are the scores for Afgooye district.

DISPLACEMENT

Primary districts of origin:

1. Kurtunwaarey (22 %)
2. Qoryooley (20 %)
3. Marka (11 %)
4. Other (47 %)

HEALTHCARE

Reported accessibility of healthcare services:

The average reported time taken to reach the closest functional healthcare facility was 32 minutes by walking.

30 % of households reported having access to a formal healthcare facility.

Top four most commonly reported challenges to accessing healthcare reported by the 70 % of households who reported not having access to formal healthcare facility:

- No health facility available: 72 %
- Facility is not functional: 25 %
- Facility is too far: 24 %
- Cannot afford treatment: 15 %

FOOD SECURITY AND LIVELIHOODS

Reported source of livelihood:

71 % of households reported depending on daily labour as their primary source of income.

21 % of households reported only having one source of income.

Top three most commonly reported challenges to accessing food reported by households:

- Limited economic resources: 80 %
- Lack of food available in the market: 36 %
- Lack of cooking utensils: 24 %

---

1 This visualization is composed of three different indicators: households with at least one pregnant or lactating woman, households with at least one person with disability and households with at least one unaccompanied or separated child.
2 Respondents could select multiple responses.
3 Findings relating to the 236 households reporting not having access to a formal healthcare facility.
SECTOR SPECIFIC FINDINGS

PROTECTION

41% of households reported their household had been registered in their settlement.

85% of households reported that all members were able to move freely in their community and surrounding area.

of households described their relations with the host community as good or very good.

Protection

41% of households reported experiencing insecurity, intimidation or violence in their current location in the 3 months prior to the assessment.

3% of households reported women and girls do not feel safe in certain areas in the site they are living in.

Top three most commonly reported areas where women and girls do not feel safe reported by the 3% households reporting women and girls not feeling safe in certain areas:

- Inside the site: 79%
- Chose not to answer: 12%
- Inside their shelters: 6%

Top three most commonly reported areas where men and boys do not feel safe reported by the 2% households reporting men and boys not feeling safe in certain areas:

- Inside the site: 38%
- Inside their shelters: 25%
- At the water point: 25%

Proportion of households that reported the following housing and property characteristics:

- They own the land they are settled on: 4%
- They pay to stay on this land: 2%
- They are at risk of eviction: 1%

EDUCATION

6% of children are reportedly attending school.

8% of households reported having a school inside the settlement or within a walking distance.

Proportion of children reportedly attending school disaggregated by age and sex:

- 8%: 5-12
- 9%: 13-17
- 5%: 13-17

---

1 This visualization is composed of three different indicators: land ownership, rent and perception of risk of eviction.
2 To pay money or give goods or service.
3 Respondents could select multiple responses.
4 Findings relating to the 12 households reporting women and girls not feeling safe in certain areas in the site they are living in.
5 Findings relating to the 11 households reporting men and boys not feeling safe in certain areas in the site they are living in.
**SECTOR SPECIFIC FINDINGS**

**SHELTER**

Most commonly reported shelter types, as reported by households:

- Buul: 90%
- Corrugated galvanised iron sheeting: 6%
- Other: 3%

Proportion of households that reported the following characteristics for their shelter:

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Proportion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Damage to shelter</td>
<td>61%</td>
</tr>
<tr>
<td>Internal separation within the shelter</td>
<td>5%</td>
</tr>
<tr>
<td>Source of light inside the shelter</td>
<td>2%</td>
</tr>
<tr>
<td>Lock on the shelter</td>
<td>15%</td>
</tr>
</tbody>
</table>

**WASH**

Top three most commonly reported primary sources of drinking water:

- Piped system: 75%
- Water tank and tap: 14%
- Protected well without hand pump: 4%

46% of households reported not being able to access enough water for domestic use (drinking/cooking/washing) at the time of data collection.

**ACCOUNTABILITY TO AFFECTED POPULATIONS**

14% of households reported receiving enough information about humanitarian assistance.

Top five priority needs reported by households:

<table>
<thead>

</tr>
</tbody>
</table>

Top two reported preferred language choices to be used by the humanitarian community:

- Maay Somali: 33%
- Benaadir Somali: 31%

Top three preferred channels to receive information reported by households:

- Telephone voice call: 66%
- Radio: 59%
- Loudspeakers: 10%

23% of households reported having access to a functioning radio.

**About REACH**

REACH facilitates development of information tools and products that enhance capacity of aid actors to make evidence-based decisions in emergency, recovery and development contexts. All REACH activities are conducted through inter-agency aid coordination mechanisms.

For more information, you can write to our in-country office: somalia@reach-initiative.org or to our global office: geneva@reach-initiative.org.

Visit www.reach-initiative.org and follow us @REACH_info.
