2 Diseases & trends

Key Acute Health Conditions
- Upper Respiratory Tract Infection (URTI)
- Urinary tract infection
- Skin infection
- Lower Respiratory Tract Infection (LRTI)
- Watery Diarrhea

During the month of January (2019), upper respiratory tract infection (URTI) was the highest reported acute health condition, with a proportional morbidity of 31%. There is a marked increase in reported lower respiratory tract infection (LRTI) cases. No significant changes in the proportional morbidity of reported eye infection, skin infection, urinary tract infection (UTI) and watery diarrhea in comparison to previous months.

Key Chronic Health Conditions
- Hypertension
- Diabetes
- Asthma
- Cardiovascular disease
- Ischaemic heart disease

During the month of January (2019), hypertension was the highest reported chronic health condition with a proportional morbidity of 29%. There is a marked decrease in reported asthma cases in comparison to the last quarter of 2018. Trend in chronic health conditions varies as a result of clinic accessibility challenges. Management of chronic diseases requires regular periodic visits to monitor diseases and evaluate therapeutic outcomes which necessitates enhanced accessibility of those morbid diseases to the health care facility.
