**GENERAL UPDATES**

- Harf Sufyan, a remote district in Amran governorate, is facing food shortage reported as the main complaint from the IDPs with only 22 of the 530 registered IDPs families in the sites who receive monthly Food Assistance from CARE under WFP. As well in Sana’a and Marib governorates, food gaps are reported by IDP hosting sites as main priority.
- Ongoing hostilities in Al-Hudaydah, Taizz, Marib and Shabwah governorates caused an influx of IDPs in Marib, Ibb, and Taiz, exacerbating existing humanitarian needs, particularly for women and children.
- IDPs in Al-Ettizaz site and Hamdan district in Sana’a governorate, and in Majzar district in Marib governorate stopped receiving water after suspension of the water supply.
- In the colder highlands of Yemen, IDPs in sites are in dire need for winterization assistance. This need was particularly reported in Sana’a, Dhamar, Ibb, and Taiz.
- In Al Dhale’, eviction threats to 258HH have been temporarily neutralized by the Executive Unit and a new relocation land has been identified.
- Due to lack of humanitarian presence, Al Bayda SCMCHA Branch encouraged humanitarian organizations to establish presence there as the security situation has improved.

**ACHIEVEMENTS**

- Site Assessment have been finalized to provide the evidence for the 2022 HNO.
- Thanks to close coordination with the WASH and Shelter Clusters, UNICEF constructed 194 latrines in Al Meqshab IDP site in Hajjah.
- 134 families received non-food items and NFI’s from RDP covering needs referred by RADF in Kua’idynah district in Hajjah governorate.
- 311 displaced families received emergency shelter and non-food items from DRC (Danish Refugee Council) in Al Jarrahi and Zabid districts in Al Hudaydah governorates.
- CCCM partners in Hajjah, Al Hudaydah, Sana’a, Dhamar, and Amran governorates completed 39 site maintenance projects focusing on flood mitigation, latrine construction, provision of solar power systems and school rehabilitation.

**CHALLENGES**

- General shortage of assistance in IDP sites remains.
- Food, WASH, and Shelter assistance gaps reported by CCCM partners are the main challenges faced.
- In Ibb and Taiz, IDP hosting sites have limited or no access to health and education services. Health services are either far from the managed sites, or treatment cost not affordable for IDPs.
- In Al Bayda governorsate and areas of Marib governorsate under de-facto authoruty’s control, IDP sites have limited or no presence of CCCM partners or activities due to limited partners capacities.

**RECOMMENDATIONS**

- National CCCM Cluster to advocate for increased resources to reach more sites, in combination with increasing mobile team capacity approach to establish or improve area-based coordination, especially in Ibb governorsate.
- National cluster to advocate with SCMCHA for pending sub agreements and temporary permits for humanitarian services to deliver assistance in IDP sites.
- Support the establishment of a new planned site in Al Dhale’e with the local authorities, as alternative solutions might take to long to negotiate.

*Disclaimer: The above only represents gaps in covered sites which were hard to solve by partners, and then were raised through the CCCM Referral and Escalation System, so the actual gaps are much higher on the ground. The RES system is functional on all hubs, and to be started on Aden hub soon.*
