EXPLANATORY NOTES:

SUMMARY:

This matrix is prepared and published monthly, representing what happened in various sectors in the particular reference month. This indicators matrix is a step towards showing a comprehensive picture of the current situation in Gambella region and establishing a basis for initial trend and gap analysis. In order to better understand the matrix, following are the explanatory notes on some of the sector indicators:

NUTRITION:

- Performance indicators for Tierkidi, Kule, Pugnido, Pugnido 2 and Okugo are within sphere standards with curate >75%, defaulter rate <15%, death rate < 10% for OTP and <3% for TSFP.
- In Jewi Nutrition services were interrupted since 21st of April 2016 and have not resumed since then. No nutrition services were provided in the month of May 2016

SHELTER:

- Over all the Camps partners continued finalizing the transitional shelters construction. The % of households in emergency family shelter indicates the need for continuous shelter intervention in all the camps.
- 'Transitional shelters' refers to those that have been completed with mud plastering.
- The 2016 shelter project has kicked off and construction of transitional shelters is ongoing

WATER, SANITATION AND HYGIENE (WASH):

- Per capita water supplied remained basically the same as the previous month except a drop in Tierkidi refugee camp due to operation and maintenance challenges with the system during the month.
- The number of persons per water tap generally stayed within the sphere stands during the month.
- Improvements realized in housed latrine coverage in Okugo, Tierkidi and Jewi. More resources still needed to bridge the current gaps in all camps.
- Number of persons visited by hygiene promoters still below standards in most camps. Efforts are being made to integrate community outreach activities with the Health and Nutrition sector as a way of increasing coverage of hygiene promotion activities.

EDUCATION:

- Gross Enrolment rate in at preschool is still very low at 36%. Reasons for low enrolment mentioned by parent are: Inability of schools to provide a feeding programme for the children; Accessibility to preschools; Lack of proper awareness on the importance of early childhood education for children; Security reasons; and children not interested in Early Childhood Care and development activities. Partners are continuously mobilizing parents to escort children to ECCD centres and there has been reassurance of protection on the way to the centres.
- The pupil /facilitator ratio is at 84 for preschool and 90 for primary school, way above the recommended standards of 30. Due to funding challenges, partners have been unable to meet this crucial indicator at the required standard.
- The Gross Enrollment Ratio (GER) at primary education is 61% which is slightly above the average.
- Secondary education in the camps is very low at only 7%. Secondary education was recently introduced in Kule and Tierkidi while Jewi camp doesn't have secondary school. This in itself contributes to the low enrolment rate. Education sector is looking for funding to support secondary education in the next financial year.
- Classroom attendance continues to be a challenge in all camps especially so with changes in weather.

HEALTH:

Mortality: Crude and Under 5 mortality rates have been within the SPHERE standards for several months. Good case management by partners for diseases such as severe malaria, dehydration secondary to diarrhea and complications of severe malnutrition contributed to reduction in mortality. Strengthened surveillance and other disease prevention efforts have contributed to early case detection and treatment. However, it is worth noting that all mortality that occurred in some camps may not have been reported significantly reducing the indicators.

Morbidity indicators

Diarrhea: The incidence of diarrheal diseases remained high in Kule camp due to multiple factors including inadequate water supply, lower latrine coverage and poor hygiene practice. Heavy rains also worsen sanitation situation in the camps as latrines are filled with water and overflow into water collections where children can go for playing.

Malaria: Malaria incidence rates remained relatively low in all refugee locations except Tierkidi and Pugnido 2. The malaria prevention and control effort such as mosquito net distribution was undertaken back in 2015 and now vulnerable groups such as children under 5 years of age and pregnant women are receiving mosquito bed nets in all camps.

Vaccination:

No arrival vaccination has been conducted at the entry points since there has been no new arrivals crossing the border.
